Brief

Create an action plan for a newly established New Zealand or Australian medical laboratory company (you can name it), focusing on its network and ensuring the company is resilient to potential disasters and attacks. You will need to demonstrate the knowledge you have gained in this subject and develop an invaluable action plan that will guide the company in building a robust network. This portfolio should highlight the competencies you have gained in data and networking through the completion of Weeks 1 – 12.

You have to imagine yourself as a consultant whom the company has contracted. Considering the importance of data, as well as the recent developments in technology, the company is looking for an action plan in relation to its network. The company understands the importance of Data and Networking, so they are focused on creating a solid network that is administrated efficiently, with effective performance management, as supported by a Network Disaster Recovery Plan (NDRP). As a specialist in the field, you need to provide a report covering all the necessary aspects of the proposed action plan.

Learning Outcomes:

The subject learning outcomes by the successful completion of the task below include:

- Develop and implement a management action plan for computational and network administration within an organisational context.
- Demonstrate proficiency with network design alternatives appropriate for a given organisational context.

Please refer to the Task Instructions (below) for further details on how to complete this task.

Instructions/Requirements

Your action plan needs to include the following sections.

1. Creating a Network

- Provide a discussion on the physical media and the topology. What are your recommendations on the physical media the company should use?
- You should discuss the recommended method of internet access. What are the advantages and potential limitations of the suggested method?
- Discuss the suggested way to store data efficiently and securely. Support your discussion with external references.
- What are some general recommendations for achieving an effective network design?
- Create a high-level network topology diagram showing the organisation of the network

(please use appropriate symbols and elements). In your discussion, you should refer to the diagram *(E.g. "As you can notice in diagram x, the company should store its data on the cloud…").*

2. Network Administration & Performance Management

- You should discuss the importance of investing in tools to enhance the capabilities in administrating the network efficiently and keep the performance on top of the standards.
- Choose a specific tool that would help the company manage the network efficiently and maintain its performance. Justify your choice and support it with external references.

3. Advice on a Network Disaster Recovery Plan

- Discuss the importance of having an NDRP. Support your discussion with external references.
- Create a blueprint of the NDRP for the two scenarios below:
    - Malware attack – some of the devices have been infected.
    - A sudden internet outage.

The two examples need to include a step-by-step guide/plan (part of the overall NDRP in the future), which needs to be executed by the company in case of the respective disasters. You should include clear and actionable steps (bullet points can help). In the case of a disaster, complications are not helpful.

- What are the recommendations you have for the company in terms of creating, maintaining and updating an efficient and effective NDRP?

You may consider the links provided below and use them as external references for the third point.

Referencing

- Please use at least 8 references that are textbooks or academic journal articles.
- You are required to use DOIs, URLs and page and paragraph numbers to reflect your capability.
- It is essential that you use APA 7th edition referencing style for citing and referencing

research. Please see more information on referencing here http://library.laureate.net.au/research_skills/referencing

Submission Instructions

Please submit the written assessment via the submission link of Assessment 3 and upload the file. The Learning Facilitator will provide feedback via the Grade Centre in the LMS portal. Feedback can be viewed in My Grades.

Suggested structure

Title/Cover page

A cover page will be required, which must include the following information:

- Subject Code
- Subject Name
- Assessment Number
- Assessment Title
- Learning Facilitator's Name
- Student Name

AI declaration

It is required that the statement below must be adhered to and added to your cover page or on a separate page after the cover page:

We declare that except where we have referenced, the work we are submitting for this assessment task is our own work. We have read and are aware of Torrens University Australia Academic Integrity Policy and Procedure, viewable online at http://www.torrens.edu.au/policies-and-forms

We are aware that we need to keep a copy of all submitted material and their drafts, and we will do so accordingly.

Introduction (120-150 words):

The introduction will serve as your statement of purpose for the report. This means that you will tell the reader what you are going to cover in your report. You will need to inform the reader of:

a) Your area of research and its context
b) The key concepts you will be addressing,
c) What the reader can expect to find in the body of the report

Body of the report (1150-1250 words):

The body will cover the specific requirements of the case study.

The conclusion (120-150 words):

It will summarise any findings or recommendations from the concepts covered in the report.

References list

Report Format and Layout

a) The report should use Arial or Calibri 11-point font, be line-spaced at 1.5 for easy reading, and have page numbers at the bottom of each page.
b) If diagrams or tables are used, attention should be given to pagination to avoid losing meaning and continuity by unnecessarily splitting information over two pages. Diagrams must carry the appropriate captioning.
c) The file is to be in Word format (.doc/.docx).
